DESCRIPTION OF STREAM CONDITION PRIOR TO LAND RECLAMATION COMMISSION PERMITTING (BY APPLICANT OR PRIOR OPERATOR), INCLUDING BANK CONDITION, BANK VEGETATION AND WATER QUALITY.

Small gravel bars to be mined, lie along a one mile stretch of Beaver Creek, and 1/4 mile stretch of Little Piney Creek North-west of Route CC. (See maps) all of this area is bordered by pasture or timber land, all of the bars have trees growing on both sides of the creek. Some banks are steep but all are well vegetated. Water quality in creek is good to excellent. Photos of creek are enclosed.

DESCRIBE METHODS USED TO REDUCE DAMAGE TO STREAM BANKS, SUCH AS PROTECTING BANK VEGETATION, IF APPLICABLE.

Gravel ~~removal~~ removal will be managed such that water flow is not redirected toward the stream bank. A 5-10' width of gravel will be left undisturbed between the operation and streambank vegetation.

DESCRIBE METHODS USED TO REDUCE DAMAGE TO STREAM ENVIRONMENTS, SUCH AS KEEPING ACTIVE MINING OPERATIONS ON GRAVEL BARS, RATHER THAN IN FLOWING WATER, AND KEEPING HAUL ROADS AWAY FROM FLOWING WATER, IF APPLICABLE.

Gravel removal will be restricted to the exposed portions of gravel (gravel bars). We will shave the tops of the gravel bars to a depth no deeper than the ~~normal~~ normal water level. This will avoid causing erosion of the streambank and channel at the mining site and upstream (headcutting). Although we must cross the stream to access the gravel bar, we will always cross the creek at the same place.

DESCRIBE METHODS USED TO PROTECT WATER QUALITY, SUCH AS INSTALLING EROSION CONTROL DEVICES, IF APPLICABLE.

Gravel removal will be restricted to periods of low flow. a 5-10' strip of gravel will be left undisturbed between the excavation and the streamside vegetation. a buffer strip will also be left between the excavation and the flowing portion of the stream.
